

Cover letter

September 28, 2022

My name is Artem Zakharenko. I have been interesting in competitive programming and math since my secondary school. After leaving school I went to university, where I continued to study mathematics, algorithms and programming in greater depth, doing olympiads at the same time. I did an internship at JetBrains, where I developed a deadlock detector for multithreaded C++ programs. I'm currently doing an internship in combinatorial optimization at RnD Huawei's mathematical programming lab, and am interested in looking for internships with interesting tasks.
